"OVAL" FIBERGLASS PIKE POLES

THE "GRIPPER" and "DOUBLE GRIPPER"

The "GRIPPER" and "DOUBLE GRIPPER" pike poles are made from an 3/4" x 1-1/8" elliptical shaped, solid yellow fiberglass rod, creating a heavy duty pike pole that is designed to handle comfortably, even while wearing gloves. All "GRIPPER" and "DOUBLE GRIPPER" pike poles are fitted with non-slip, black rubber hand grips. The fiberglass poles will not rust, corrode or dry rot. They are tough, durable, electrically resistant and like all fiberglass products require no maintenance.

Safety Yellow Oval Fiberglass Pole

The "GRIPPER" comes in any size from 2' to 16'. You can ship via UPS any "GRIPPER" up to 9' long; if over 9', shipping will be via truck freight.

The "DOUBLE GRIPPER" pike pole has all the same quality features as the "GRIPPER" except the 10' and longer pike poles can be shipped in two parts via UPS, saving you many dollars in truck freight. Underneath the non-slip grip is an elliptical, metal sleeve, that has been attached with epoxy and two spring steel roll pins. All you have to do is insert the rod with the pike pole head into the sleeve, mix the supplied epoxy kit and drive in the two roll pins, creating a heavy duty, one piece pike pole.

USA Hook Standard

Dry Wall Hook (DWH) Optional

Rubbish Hook (RH) Optional

D-Ring Handle (D) Optional

Any Pike Poles & More head or handle can be mounted as per your specifications. The standard USA pike pole head is made from extremely durable, malleable iron. The Rubbish Hook and Dry Wall Hook are manufactured from high strength steel. All D-Handles are heavy duty, cast aluminum. Unlike others, all pike pole heads and handles are attached with two spring steel roll pins. Therefore, heat will not cause the "GRIPPER" and the "DOUBLE GRIPPER" pike pole head or handle to separate from the pole.

"I-BEAM" FIBERGLASS PIKE POLES

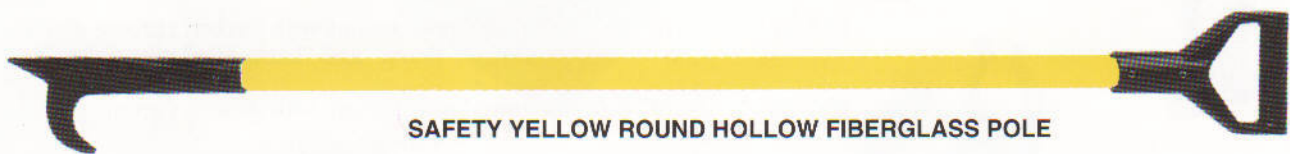

SAFETY YELLOW I-BEAM FIBERGLASS POLE

The "I-BEAM" pike pole is the same heavy duty construction which you have been accustomed to from GFE Manufacturing. It is shaped like a massive "I-BEAM" yet slightly rounded to fit your hand and is constructed from a one piece pultrusion of solid fiberglass. All of our heads are designed to fit perfectly over the "I-BEAM" rod and held solidly in place with two steel spring roll pins. No epoxy is needed to hold the pike pole head in place. Along the top of the pole is a groove so you always know the position of the hook on the end of the pole. The opposite end of each "I-BEAM" pike pole is fitted with a heavy duty rubber bumper so that the fiberglass rod does not fray or split.

1-1/4" ROUND "ULTRA-LITE" FIBERGLASS PIKE POLES

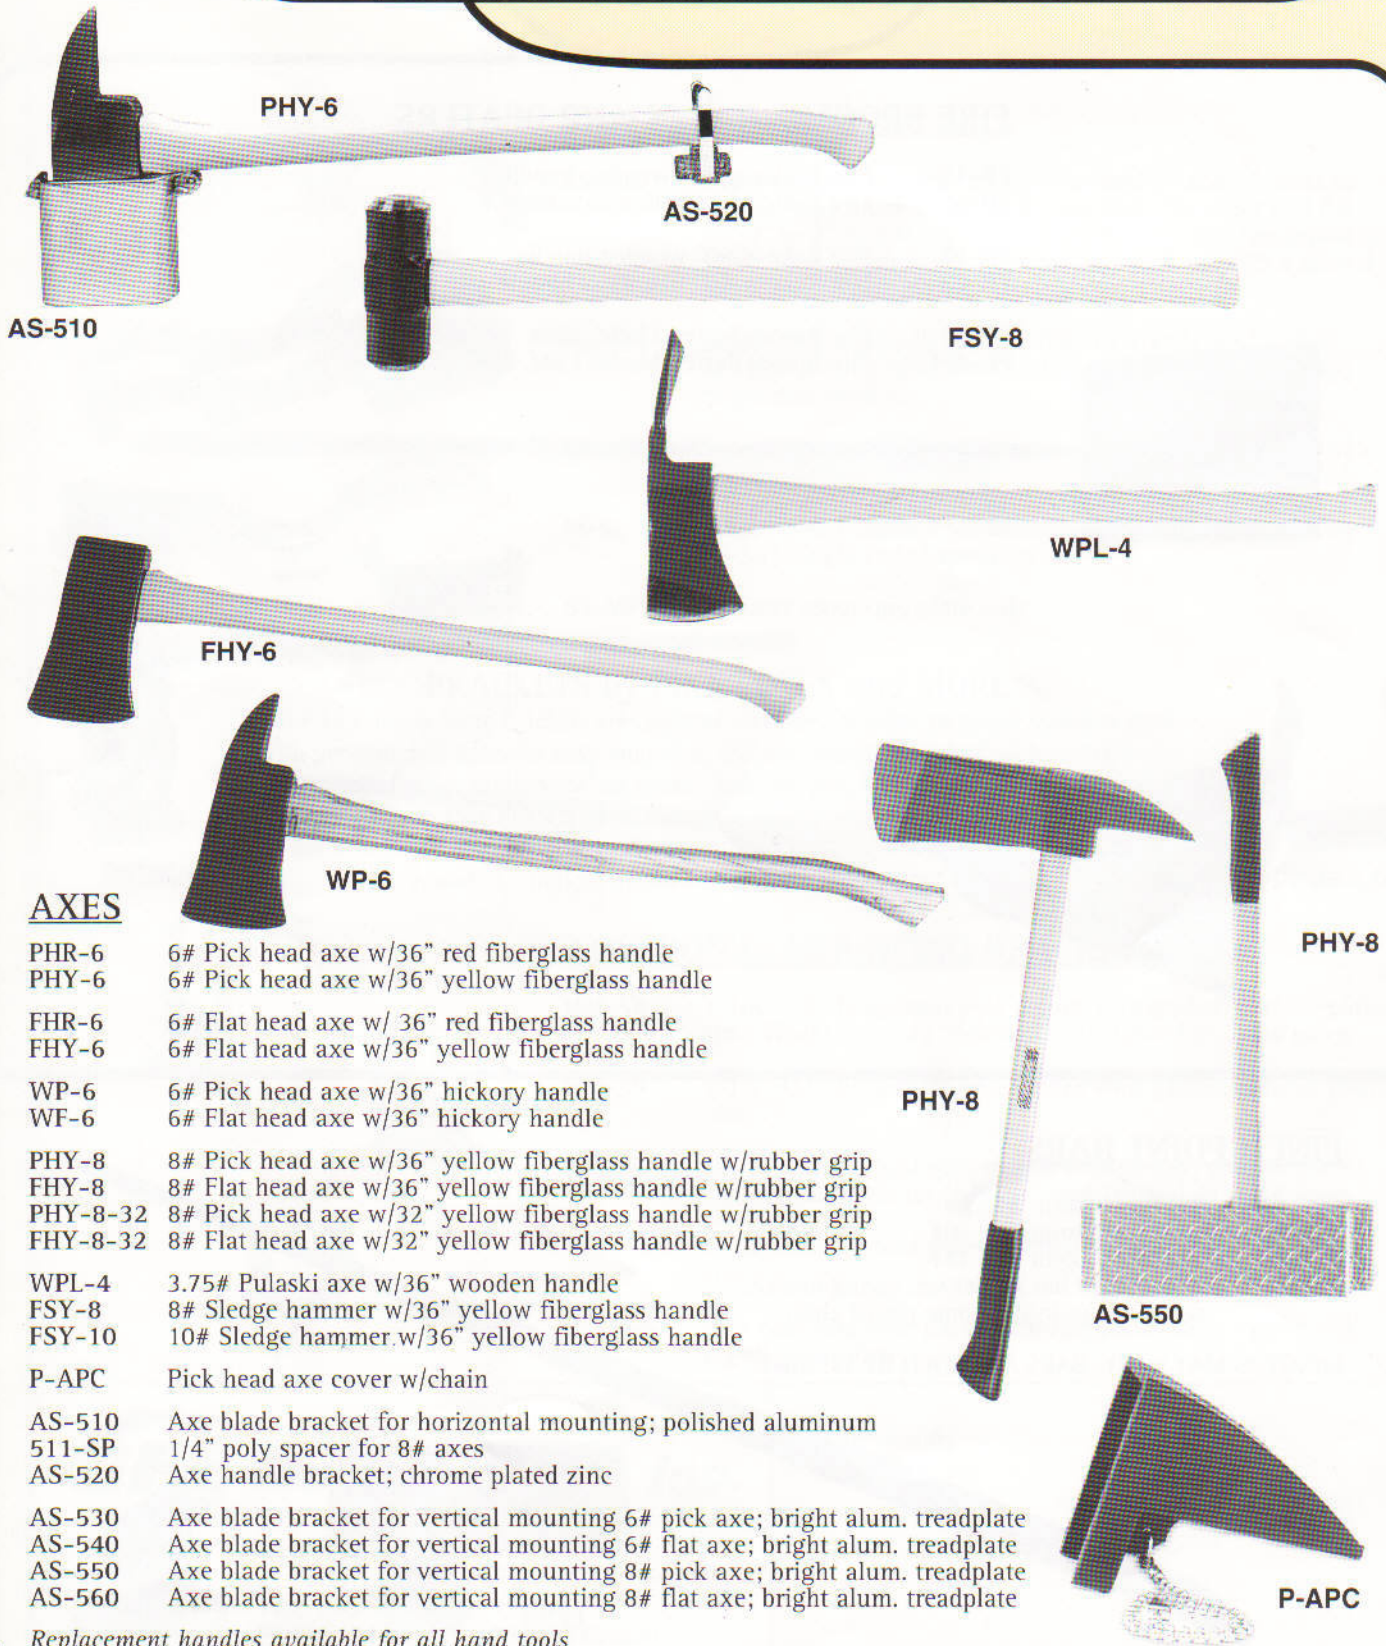

SAFETY YELLOW ROUND HOLLOW FIBERGLASS POLE

The "ULTRA-LITE" and "DOUBLE ULTRA-LITE" pike poles are made of 1-1/4" hollow, round shaped, yellow fiberglass creating a heavy duty pike pole that is lightweight and designed to handle comfortably. The "ULTRA-LITE" series uses a continuous strand of fiberglass matt with unidirectional roving fiberglass to give it maximum strength. The fiberglass poles will not rust, corrode or dry rot. They are tough, durable, electrically resistant and like all fiberglass products require no maintenance. All of our heads and handles are designed to fit perfectly over the "ULTRA-LITE" pike pole rod and are held solidly in place with two spring steel roll pins. No epoxy is required to hold the pike pole head or handle in place. The opposite end of each "ULTRA-LITE" pike pole is fitted with a heavy duty rubber bumper so that the fiberglass rod does not fray or split.
